Photo

Ibraheem Farooq

PM / Scrum Master

A Computer Science major based in Islamabad who transitioned from designing posters and brand identities to UX and product design. His technical background provides a unique perspective on bridging digital experiences that balance user needs with technical viability. Passionate about solving real problems through thoughtful design and clean, intuitive interfaces.

Photo

Wajih-Ur-Raza Asif

Requirements Architect / Tester

A software engineer focused on building practical systems that solve real operational problems. His background spans end-to-end projects across different technologies, with a strong interest in automation, AI-driven workflows, and scalable system design. Currently expanding his understanding of enterprise technology and systems that make processes more efficient and reliable.

Photo

Ali Aan

Developer / UI Designer

An AI Engineer driven by a simple goal: building applications that work at scale. His expertise lies at the intersection of high-performance backend architecture and agentic systems. He specialises in designing and deploying scalable infrastructures that power intelligent applications. Beyond the code, he is a robotics enthusiast passionate about bringing new ideas to life.

1.3 Team Agreement

Communication

- **WhatsApp** — primary channel for daily coordination; respond within 1 hour.
- **In-person** — preferred when on campus.
- **Google Meet** — for remote meetings.
- Urgent issues: tag the team and respond within 20 minutes.
- If unavailable: post an async update in WhatsApp within 24 hours.

Meetings

- Mandatory: Sprint Planning, Sprint Review, Sprint Retrospective.
- Regular check-ins: 4× per week (in-person or Google Meet).
- Absence: notify team 24 hours in advance and share an async update.

- Every meeting ends with: decisions + action items + owners.
- Notes: rotating assigned person.

Meeting Preparation

- **Sprint Planning:** review backlog, propose task breakdowns.
- **Review:** prepare demo flow + screenshots.
- **Retrospective:** each member prepares (1) what went well, (2) what did not, (3) what to change.

Version Control

- Small, atomic commits; new branch per ticket.
- PR required before merging; do not commit secrets, credentials, or large binaries.
- Commit message format: `feat:`, `fix:`, `docs:`, `chore:`

Division of Work

Owner	Responsibility
Wajih	Requirement ownership: user stories, structured specs, and consistency checks.
Ali	UI ownership and feature implementation.
Ibraheem	Coordination, sprint tracking, packaging, and final submission.

Contingency Plan. If a member becomes unavailable or falls behind, the team will re-scope to the minimum required deliverable content, redistribute work immediately, and prioritise required artefacts. The PM/SM will update the board, assign new owners, and schedule an urgent meeting to unblock progress.

Submission Protocol

- **Submission owner:** Wajih.
- **Internal review:** Ibraheem and Ali.
- **Internal cutoff:** finalise 24 hours before the deadline.
